

PictureTally[®] for Logs

River City Software

Product Description

PictureTallyforLogs accurately and quickly scales logs.

PictureTallyforLogs eliminates the person on the ground measuring log diameters and keeps wood moving.

PictureTallyforLogs uses digital camera and laser technology to make the job simple and efficient without leaving the cab of a knuckle boom.

The PictureTally camera and control equipment (in white) are mounted on the outside of the cab in a weather-proof enclosure.

Here an operator taps the touch-screen to measure the log.

Product Specifications

Operating Temp: -20°F to 120°F
Power Requirements: 12 V DC or 120 V 60 Hz AC
Computer: Industrial, WindowsXP
Accuracy: measures to 1/4 inch, 6" to 48"
System enclosures: NEMA

PictureTally[®] for Logs has been developed in partnership with leaders in hardwood manufacturing.

PictureTally for Logs system includes an industrial touch-screen mounted inside the cab for the operator's comfort and convenience.

Benefits

- Fast
- Accurate
- Productive
- Comfortable
- Efficient

How it Works

1. The log is pointed at the PictureTally[®] camera.
The distance from log to camera is automatically calibrated and can vary from 6 feet up to 10 feet.
2. The system operator taps the touch-screen.
This tap triggers the system to photograph and measures the log.
3. The measurements appear on the screen.
Minimum diameter, maximum and average diameter
